Review: TripIt Pro -- notification of travel delays and cancellations, and other travel assistance

I've been using the free TripIt service for many years. I reviewed TripIt back in 2013, and while the service and the app have improved since then, the basic idea is the same. When you make a travel reservation and receive the email from the airline, hotel, rental car agency, train, etc., you simply forward that email to TripIt. The service recognizes you from your email address, reads and understands the content of those emails, and prepares an online itinerary for your trip. With the free TripIt app on your iPhone (or iPad), all of your travel info is in one place. Thus, if you are in the middle of your trip and need to find the name or address of your hotel, or a reservation number, everything is in one place in the TripIt iPhone app. It is a like a virtual travel agent which provides all of the core basic features. I love the service and recommend it to everyone.

Review: Anker PowerCore 10000 PD Redux -- USB-C portable charger

Portable chargers with a traditional USB connector are always useful for anyone with an iPhone or iPad. They are useful when you are away from the home or office, especially when traveling. And as many in the country (including me) were reminded last week, they are also very useful when you lose power at your home as a result of bad weather.

Nowadays, however, many devices can charge faster with a newer USB-C PD connection, which provides more power and can charge more quickly. Some devices even require the extra power that you get with USB-C. Earlier this year, after doing some research on the available portable chargers, I decided to purchase a device made by Anker called the PowerCore 10000 PDF Redux. After using this product for over a month, I'm incredibly happy with it and I highly recommend it. It is great for charging an iPhone or iPad, and it has even made my HomePod mini much more enjoyable.

Design

This device is small and portable. It is just over 4" long, about 2" wide and about 1" tall. Because of the curved sides, it is easy to hold in a hand. The device weighs less than 7 ounces, so it adds a little bit of weight to a briefcase or purse, but not very much. You can definitely walk around with this device in your pocket, if necessary.

March 21, 2018

Review: PowerPort+ 5 Ports USB-C -- fast-charge an iPad Pro, iPhone X or iPhone 8, plus charge four other devices

Back in 2015, I reviewed the Anker PowerPort 6, a great device that lets you plug into a single wall outlet and charge six USB devices at once. Since then, that device has been an essential part of my travel gear. It is nice when you only have to locate one available outlet in a hotel room, conference area, airport, etc., and from that one outlet have the ability to charge multiple devices. Often, that Anker charger was the only charger that I needed on a trip. That changed when I started to use an iPad Pro in early 2016 because a traditional USB-to-Lightning connection takes a long time to charge the powerful iPad Pro. Ever since March 2016, I have mostly charged my iPad Pro (or iPad Pro 2) using Apple's 29W USB-C Power Adapter and Apple's USB-C to Lightning Cable (my review), which recharges much more quickly. So when I traveled, that meant carrying two chargers.

To try to get back to carrying one charging unit during travel, a few weeks ago I purchased from Amazon Anker's PowerPort+ 5 Ports USB-C, a single unit which features both a single USB-C port for fast-charging, plus four other USB ports. I've used this device on two out-of-town trips, and it has worked very well. [**UPDATE: 1/27/2019**: I see that Anker is now selling an updated version of this device, and it is currently on Amazon for only $35.]

Charge and connect with the USB-C port on your iPad

Use the versatile USB-C port on your iPad to charge, connect to accessories like external storage devices, cameras, and displays, and power other devices.

Charge your iPad or iPhone from your Mac

Apple Support Article

Use your iPad to charge other devices

Away from a power outlet and need to charge your iPhone, other iPad, Apple Watch, or third-party USB device? Just connect the right cable or adapter to your iPad to share its long-lasting battery with your other devices:

- To charge your iPhone or earlier-model iPad that has a Lightning port, connect it to your iPad using the Apple USB-C to Lightning Cable. If you have a Lightning to USB cable, you can combine it with the Apple USB-C to USB Adapter, then connect the adapter to your iPad.
- If you have two iPad models with USB-C ports, you can connect them directly with a USB-C cable. One iPad will draw power from the other. If you want to change which iPad charges, unplug the USB-C cable and then reconnect them.
- Charge your Apple Watch by connecting its Magnetic Charging Cable to your iPad via the Apple USB-C to USB Adapter. If you have an Apple Watch Magnetic Charger to USB-C Cable, you can connect it directly to your iPad.

Charge your iPhone from your iPad

Review: Satechi 108W USB-C 3-Port GaN Wall Charger

In my recent review of the Anker Nano Pro (40W), I explained why USB-C chargers are becoming increasingly valuable. More and more devices support USB-C, and the connector provides much more power than regular USB. After researching the best multi-port USB-C chargers, I recently purchased the $75 Satechi 108W USB-C 3-Port GAN Wall Charger. I've been very happy with this device. In a relatively small amount of space, this charger can support three simultaneous USB-C cords. Better yet, it can provide a lot of power to each of those ports, going beyond the 20W that you get with that Anker Nano Pro and many other chargers.

For many years, iPhones, iPads, and similar devices were charged with a small 5W charger. But as the power requirements of these devices have increased, chargers have also become more powerful. However, more power can mean more heat, so chargers traditionally use internal circuits to control the flow of energy. Many chargers use silicon chips for these circuits, just like the iPhone itself. But a relatively new alternative to silicon is gallium nitride, known as GaN. This material can conduct higher voltage for a longer period of time than silicon, and can do so more efficiently. Greater efficiency means that the size of the charger itself can be smaller. And the larger power means that devices can charge more quickly. Put this all together, and you can use GaN chargers to provide more power in a smaller package to charge your devices more quickly.

The Satechi 108W USB-C 3-Port GAN Wall Charger is a compact GaN charger that can charge up to three devices at one time.

Review: Weather on the Way -- weather forecasts for a road trip

Weather apps are great when you want to know the forecast, but only if you will remain in the same location. What if you are driving across the country on a road trip? To find out what the weather will be like in a few hours, you need to know where you will be in a few hours. And while you could do all of this manually—guessing at the city where you will be and then looking up the forecast for the hour that you think you will be there—that is a lot of work. The Weather on the Way app does all of this work for you.

I mentioned this app about 18 months ago in an In the News post, noting that I would use the app the next time that my family takes a road trip. Because of COVID and a number of other reasons, my wife and I decided to drive from New Orleans to New York to visit family for Christmas instead of flying, and it was a perfect reason to use this app because of the dramatic change in temperature along the way.

When you start using the app, it works like a map app. Your current location is listed in "A" (change that if you want) and then you place an ending location in "B". The app shows the most direct path from A to B along with the weather at selected locations along the map and the approximate time you will be in each location.

iExit

Designed For The Interstate

Open the iExit app on or near any interstate nationwide and watch the magic unfold. It finds you automatically, shows you exits ahead, and allows for easy searching. **Your GPS will tell you how to get there, but iExit will tell you where to stop along the way.**

Available on the App Store

ANDROID APP ON Google play

Third Party Integrations

OPIS

iExit groups OPIS's real-time fuel prices by Interstate exit, making it easy to find the cheapest exit ahead, **even 100 miles down the road**.

yelp

iExit has always been great at helping you find your favorite brands. But now with Yelp, **you can discover great new businesses right near exits**.

Travel Coupons

Looking for a hotel tonight? Travel Coupons provides thousands of amazing same-day hotel deals that are cheaper than anything you'll find online.

Review: Weego Jump Starter 22 -- jump start your car battery and recharge your iPhone battery

Many of us keep handy an external battery that can be used to recharge an iPhone. Howeve occasionally you need to charge another mobile device: a car. If you ever find yourself with car battery, sometimes it is possible to find a friend with another car and jumping cables, b a huge aggravation and may not even be possible depending upon where your car is located simple solution is to keep a portable jump starter in your trunk. The Weego Jump Starter 2 amazing device that makes it incredibly simple to jump start your car, and as an added bonus you can use charge an iPhone or iPad. This device recently saved my bacon, and I enthusiastically recommend that you get this device now so that you have it when you need it.

CarPlay Tips

Rearrange the icons on CarPlay Home

1. When you're not operating your vehicle, open Settings on your iPhone, go to General > CarPlay, select your vehicle, then tap Customize.
2. Do one of the following:
   - *Move an icon:* Drag ☰ up or down in the list.
   - *Remove an icon:* Tap ⊖ next to the icon, then tap Remove.

     Only icons that have ⊖ next to them can be removed.
   - *Add an icon back to CarPlay:* Below More Apps at the bottom of the page, tap ⊕ next to the icon.

6 Best Ways to Track a Flight Online

Follow planes online to see if your flight is on time or not

By Tim Fisher · Updated on October 14, 2021

TRAVEL TECH

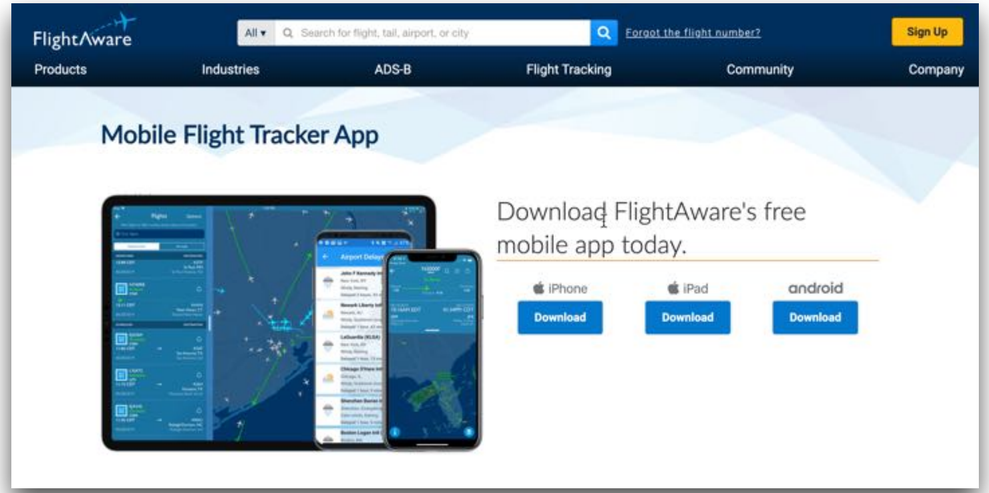

Digital Cameras & Photography

Flight tracker websites let you follow a plane from the time it leaves until it reaches its destination. There are several reasons you might want to use a flight tracking site.

A website that lets you track your flight is helpful for many reasons: stay up to date on your flight's schedule, including delays and weather, see where you are in the air in real-time, and for some flight trackers, you can even find parking deals for when you arrive.

You can also use an online flight tracker to trace another person's flight or even to just view all the air traffic in your area or monitor a specific airport's congestion.

Review: AirFly by Twelve South -- use your AirPods with any headphone jack

Wireless headphones in general are very useful, but Apple's AirPods in particular are one of my all-time favorite gadgets. I barely feel them in my ears, and they let me listen to music, podcasts and videos without any annoying cords hanging down my face. To use AirPods, you need an iPhone or other device with Bluetooth. What do you do if you want to use your AirPods to listen to audio coming from a headphone jack but Bluetooth is unavailable, such as an in-flight entertainment system on an airplane or the audio in a health club? The clever folks at Twelve South developed the AirFly for this very situation. Plug the AirFly into the headphone jack of the audio source, and then the AirFly uses Bluetooth to send the audio to your AirPods. Twelve South sent me a free sample unit for review purposes, and this device is great. The AirFly is a simple solution that works very well.

The hardware

The AirFly is smaller than the case that holds your AirPods. It is 1.8" high, 1.3" wide, and has a depth of . And it weighs about a half an ounce — virtually nothing. It comes with two small cords, a USB-to-Micro- that you use to charge the AirFly, and a small headphone cable.

Review: Flipster -- read magazines, for free, on your iPad thanks to your local library

The holiday season can be a perfect time to flip through some magazines, whether you are traveling by plane or train or just looking to fill a few minutes of down time at an in-law's house. Instead of spending lots of money at an airport newsstand, you can get magazines for free at your local library. And thanks to the digital services available at modern libraries, you can download full copies of magazines, for free, on your iPad. There are different apps that offer this service so you need to find out which one your library uses. My library, the New Orleans Public Library, uses an app called Flipster. (A similar app used by some libraries is RBdigital.)

The Flipster service is not limited to public libraries. It also works with certain academic libraries, schools, companies, and governmental entities.

Although you don't have to visit a branch of your library to download magazines to the Flipster app, you do need to have an active library card. Once you follow the instructions in Flipster to authenticate through your local library, you can then use the Explore tab at the bottom left to see all of the magazines that are offered.

Meet Libby.

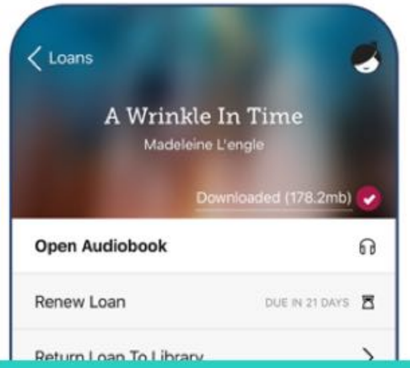

Did you know your local library has thousands of ebooks and audiobooks?

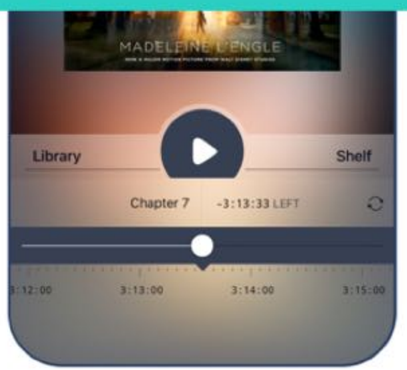

You can borrow them, instantly, for free, using just the device in your hand.

Get the app for your phone or tablet!

- Sign in to multiple libraries, with one or more cards for each library.
- Download books and audiobooks for offline reading, or stream them to save space.
- If you prefer reading on your Kindle, Libby can send your library books to it. (U.S. libraries only.)
- All your loans and holds are consolidated on a single shelf.
- Keep track of your reading history in the Activity tab.
- Positions, bookmarks, and notes are kept in sync across your devices.
- Sample any book with a tap — nothing to download or delete.
- Try a zoomable graphic novel, or a picture book with readalong audio.

Kindle on the iPad

INTRODUCTION

This is not a book about telling your company's story. A book like that would be a waste of time. Customers don't generally care about your story; they care about their own.

Your customer should be the hero of the story, not your brand. This is the secret every phenomenally successful business understands.

What follows is a seven-part framework that will change the way you talk about your business and perhaps the way you *do* business.

Each year we help more than three thousand businesses stop wasting money on marketing and get their company growing by helping them clarify their message. This framework will work for you, regardless of your industry.

How to download titles to watch offline

To watch TV shows and movies offline at any time, download them from the Netflix app. Learn more about finding, downloading, and watching downloaded TV shows and movies below.

To download from Netflix, you need the latest version of the Netflix app on one of these devices:

- **iPhone, iPad, or iPod touch** running iOS 9.0 or later
- **Android phone or tablet** running Android 4.4.2 or later
- **Amazon Fire tablet** running Fire OS 4.0 or later
- **Windows 10 (version 1709 or newer) or Windows 11 tablet or computer**
- Select **Chromebook and Chromebox** models

Find and download a TV show or movie

Tap on any TV show or movie and look for the **Downloads** icon ↓ to see whether it can be downloaded, or filter by what is available for download. Not all titles are available for download.

1. Open the Netflix app and tap **Downloads** ↓.
   - On a device running Windows 10 or Windows 11, open the Netflix app and select **Menu** ☰.
2. Select **See What You Can Download**, **Find Something to Download**, **Find More to Download**, or

Learn how to download or stream content from Apple TV+ or Apple TV channels.

Download a show or movie on your iPhone, iPad, iPod touch, or Mac

Download TV shows and movies that are included with your subscription to Apple TV+ or an Apple TV channel like STARZ, AMC+, EPIX, or A&E Crime Central.

1. Open the Apple TV app on your iPhone, iPad, iPod touch, or Mac.
2. Browse or search for a movie or TV show.
3. Find the download button and tap or click it.

Review: On/Go at-Home COVID-19 Rapid Antigen Self-Test -- let your iPhone help you test for COVID

So far, I have experience with three different COVID self-tests. The one that I am discussing today, the On/Go COVID-19 Antigen Self-Test, is easy to find because it is on Amazon, it is basically free if you live in the United States because you can now get reimbursed from your health insurer, and it is especially easy to use because it works with a free iPhone app. While you can use the test without an iPhone by following printed directions, it is far easier to use this test with the app because the app clearly walks you through every step of the process.

I first came across the On/Go COVID-19 Antigen Self-Test because I was trying to find a COVID test at local pharmacies and they were out of stock. Thus, I turned to Amazon and found this test, which is one of the 13 brands of self-tests authorized by FDA under an Emergency Use Authorization. The On/Go product is manufactured in the United States.

Taking the test

When you first use the On/Go app, you need to provide some basic details such as your name. After that, to use this test, click the Start test button.

Review: Glif + Hand Grip + Wrist Strap by Studio Neat -- hold your iPhone steady for video and photos

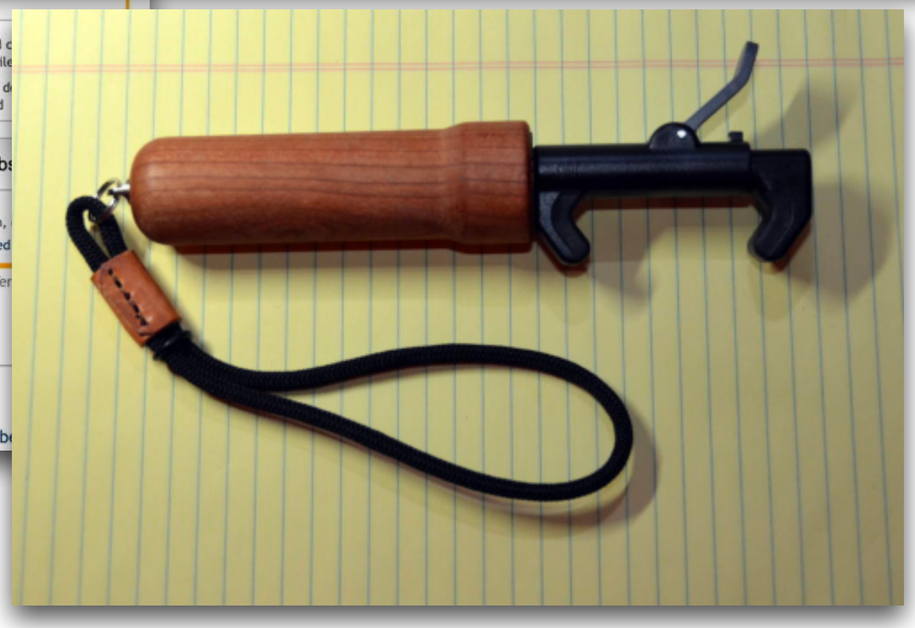

I often use my nice Nikon DSLR camera to take photos because the telephoto lens and add-on flash allow it to take fantastic pictures, typically (although not always) better than my iPhone. But I don't use my Nikon camera to take video anymore because as the quality of video on the iPhone has improved over the years, it now usually does a better job than my more expensive SLR camera. The videos are bright and always in focus, and I can even shoot in 4K or 60 fps. But holding up an iPhone in my hand to take videos of more than a few minutes makes my hand tired, which makes my hand shake, which reduces the quality of the video. The Glif by Studio Neat is a clip that attaches to the iPhone, making it possible to keep the iPhone steady by mounting it on a tripod. The Glif has been around for a while, but it was significantly improved this year, and can now be purchased with a hand grip accessory. Studio Neat sent me a free review unit and I've been testing it out for the last few weeks. It works incredibly well.

Glif

I've tried lots of different devices over the years that purport to hold an iPhone for taking pictures or videos. The only ones that really felt secure were iPhone cases, but those stop working whenever Apple releases a new iPhone model with a different shape.

The Glif has an ingenious solution to this problem — one of those solutions that once you see it, you wonder why everyone hasn't been doing it this way all along. The Glif has a lever on the back. With the lever pulled back, you can freely move the clamps on the Glif up and down to accommodate any size iPhone, even when in a case. It can
